

The Universe PowerPoint

You will create a PowerPoint with ten slides. For each slide choose the layout that best fits your needs based on what each slide will contain. Be creative! Use a different background for each slide. Type the following on each slide:

Slide # 1: Our Universe & By (Your name)

Slide # 2: What star are we most familiar with?

- The Sun
- The sun is never in just one place - it is always moving.
- It is the star that is closest to Earth
- In olden days, people thought the sun was a perfect sphere of fire created by the Gods.
- It was later seen as a solid object or a ball of liquid.

Slide # 3: Dangers of the Sun

- You should never look directly at the sun or through a telescope or binoculars - you could damage your eyes permanently.
- Too much sun exposure can cause cancer of the skin

Slide # 4: How large is the Sun?

- The Sun is the size of an average star, but it is much larger than the Earth.
- If you put 333,000 Earths together, it would be the size of the Sun.

Slide # 5: What Planet Are We Most Familiar With?

- Earth
- The Earth's surface consists mostly of water.
- The Earth is constantly changing due to volcanoes, earthquakes, shifting sands, and flowing water

Slide # 6: Earth

- The Earth's tilt toward the sun causes the change of seasons.
- The center of our planet lies nearly 6,400 kilometers below the surface.

Slide # 7: Some facts about the Earth

- Earth behaves as though it has a giant bar magnet inside, running from north to south.
- Water covers 70% of the surface and is part of the atmosphere as well.
- Earth has one natural satellite, the Moon. It is an airless world with a diameter about 1/4th that of Earth.

Slide # 8: My Favorite Place in the Universe?

(List two of your personal favorite places. Examples include a country, the mall, Fenway Park, or just my bedroom.)

Slide # 9: The Solar System

The Sun, Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune.

Slide # 10: The End
